

CORE PORTFOLIO SERIES

PURE ASSET CLASS EXPOSURE

As of December 31, 2023 | Updated Annually

The CORE Portfolio Series focuses on getting invested and staying invested by building a portfolio optimized for all risk and reward characteristics. To do this, CORE holds fifteen (15) different asset classes at once and re-balances between them throughout an entire market cycle.

CORE captures risk premium over an entire market cycle through mean variance optimization or “MVO.” MVO or Modern Portfolio Theory is an investing approach built on the premise that financial markets are efficient and cannot be predicted, only reacted to. By owning uncorrelated assets and re-balancing over time, an optimal portfolio can be maintained for an investor by buying low and selling high throughout market cycles.

EFFICIENT FRONTIER OF CORE PORTFOLIOS

For illustrative purposes only

- **Risk based allocation utilizing efficient core index ETFs**
- **Strategic asset allocation aimed at achieving market returns given a certain level of risk**
- **Five (5) portfolio strategy tiers, from conservative to aggressive**

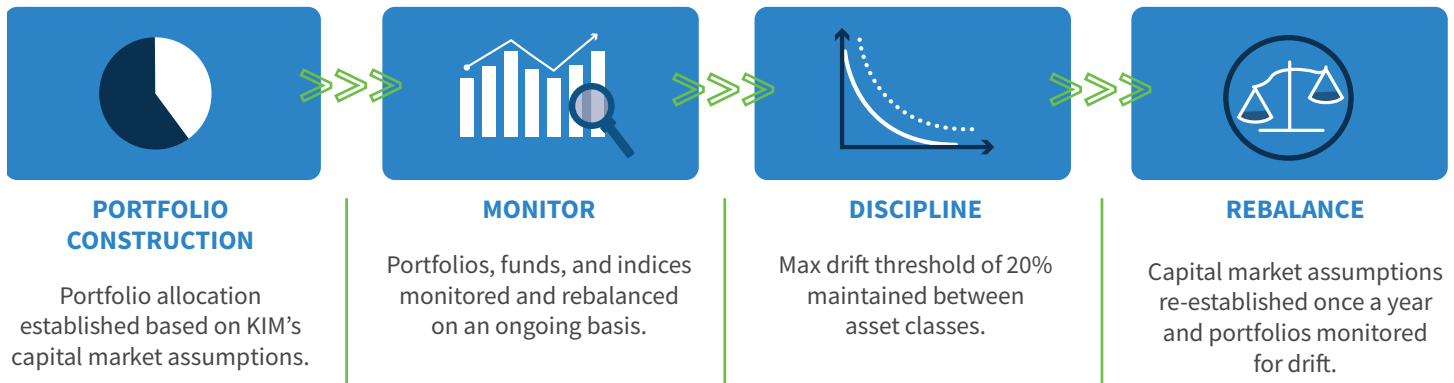

SAMPLE BALANCED ALLOCATION

		Balanced
FIXED INCOME	CASH	1.00%
	HIGH YIELD BOND	12.50%
	INTERMEDIATE BOND	22.00%
	LONG TERM BOND	2.50%
	SHORT TERM BOND	12.50%
EQUITY	LARGE CAP GROWTH	12.00%
	LARGE CAP VALUE	12.00%

PORTFOLIO PROCESS

CORE utilizes diversified risk exposure as the foundation of an investors portfolio. By incorporating risk based allocations combined with efficient index ETFs, long term asset allocation goals can be achieved while controlling volatility.

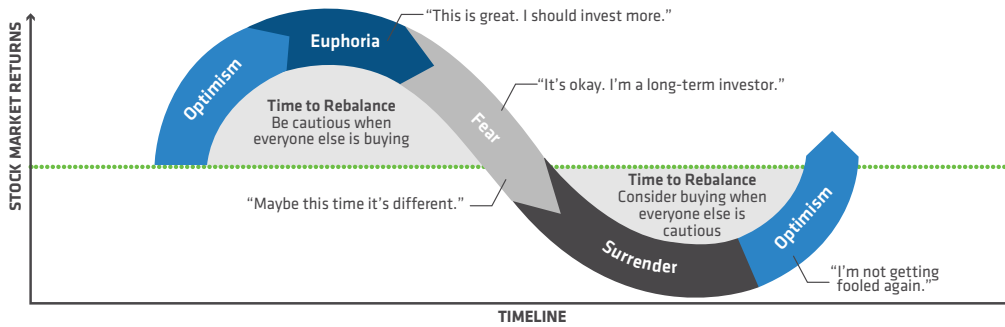

Targets are set and rebalanced over time with the goal being to ensure the portfolio remains in balance throughout the market cycle.

WHY STRATEGIC?

Strategic asset allocation, also known as risk budgeting or Modern Portfolio Theory, is an investment approach that allocates your investment capital to multiple non-correlating asset classes. Owning multiple unrelated asset classes at the same time can have diversification benefits as well as improve risk and reward relationships. Strategic investing believes in the theory that asset allocation is the most important driver of long term returns; an investment thesis that has been substantiated by many academic studies.

These papers also suggest that security selection and market timing account for less than 7% of long term return attribution. The early works of Harry Markowitz in 1952 laid the framework for what is now known in the industry as the mean-variance optimization model in portfolio management. The Kingsview Investment Management SAM Portfolio Series understands that time in the market beats timing the market.

Asset classes move unpredictably and typically overshoot as well as undershoot in the market price discovery process. With less focus on individual security selection and more focus on indexing across a variety of stock & bond indices, strategic asset allocation can help you get invested today, and stay invested over time capitalizing on volatility instead of becoming victim to it.

Two particular studies in portfolio performance attribution by Brinson, Hood & Beebower in (1986), and Brinson, Singer and Beebower in (1991) concluded that over 90% of total portfolio performance and volatility resulted from asset allocation and that most other factors have only a minor impact over time.

DISCLOSURES

Kingsview Wealth Management ("KWM") is an investment adviser registered with the Securities and Exchange Commission ("SEC"). Information presented is for educational purposes only and does not intend to make an offer or solicitation for the sale or purchase of any specific securities, investments, or investment strategies. Investments involve risk and unless otherwise stated, are not guaranteed. Kingsview Investment Management ("KIM") is the internal portfolio management group of KWM. KIM asset management services are offered to KWM clients through KWM IARs. KIM asset management services are also offered to non KWM clients and unaffiliated advisors through model leases, solicitor agreements and model trading agreements. KWM clients utilizing asset management services provided by KIM will incur charges in addition to the KWM advisory fee. This material has been prepared by Kingsview Wealth Management, LLC. It is not, and should not, be regarded as investment advice or as a recommendation regarding any particular security or course of action. Opinions expressed herein are current opinions as of the date appearing in this material only. All investments entail risks. There is no guarantee that investment strategies will achieve the desired results under all market conditions and each investor should evaluate their ability to invest for the long term. This information does not address individual situations and should not be construed or viewed as any typed of individual or group recommendation. Be sure to first consult with a qualified financial adviser, tax professional, and/or legal counsel before implementing any securities, investments, or investment strategies discussed.

Past performance is no guarantee of future results. The information provided is for illustrative purposes only and is not representative of the performance of any particular investment. Diversification does not ensure profit or protect against loss.

All indexes are total return unless otherwise noted. Performance for total return indexes reflects the reinvestment of dividends and capital gains. It is not possible to invest directly in an index. Indexes are unmanaged and index returns do not reflect fees, expenses or sales charges. Indexes were chosen that Kingsview deems representative of the listed asset classes and sectors.

The **So-P Small Cap 600 Total Return Index** measures the small-cap segment of the U.S. equity market. The index is designed to track companies that meet specific inclusion criteria to ensure that they are liquid and financially viable.

The **So-P Mid Cap 400 Total Return Index** is a capitalization-weighted index which measures the performance of the mid-range sector of the U.S. stock market.

The **So-P 500 Total Return Index** is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

The **Dow Jones Equity REIT Total Return Index** represents all publicly traded real estate investment trusts in the Dow Jones U.S. stock universe classified as equity REITs according to the So-P Dow Jones Indices REIT industry classification hierarchy. These companies are REITs that primarily own and operate income-producing real estate.

The **Bloomberg US Corporate High Yield Total Return Index** measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and So-P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on Bloomberg EM country definition, are excluded.

The **Bloomberg Municipal Bond 7 Year Total Return Index** is a subset of the Bloomberg Municipal Bond Index that measures the performance of investment-grade issues with remaining maturities of seven to eight years.

The **Bloomberg US Aggregate Bond Total Return Index** is an index designed to provide a measure of the performance of the U.S. investment grade bonds market, which includes investment grade U.S. Government bonds, investment grade corporate bonds, mortgage pass through-securities and asset-backed securities that are publicly offered for sale in the United States.

The **MSCI EAFE Total Return Index** is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada.

The **MSCI Emerging Markets Total Return Index** is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets.

The **HFRX Global Hedge Fund Index** is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies; including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage and relative value arbitrage. The strategies are asset weighted based on the distribution of assets in the hedge fund industry.

The **Bloomberg Commodity Total Return Index** is designed to provide liquid and diversified exposure to physical commodities via futures contracts. The index is made up of 22 exchange-traded futures on physical commodities, which are weighted to account for economic significance and market liquidity.

The **MSCI ACWI Total Return Index** is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI consists of 46 country indices comprising 23 developed and 23 emerging market country indices.
