## FACT SHEET

# 1Q 2022

### STRATEGY OBJECTIVE

Outperform a traditional domestic 50/50 balanced index by tactically positioning investments through a diverse group of asset classes. The goal is to create a more attractive balanced allocation by overweighting or underweighting asset classes that are desirable or undesirable for investment.

### PHILOSOPHY

We believe a fundamental perspective paired with quantitative execution will result in long-term outperformance.

- **Tactical ETF Selection** – Equity investments feature specific sector selection; fixed income investments span various durations as well as issuer and credit quality. Alternative investments highlight a broad range from commodities to currencies, as well as inverse positioning.
- **Risk Management** – Provide investors with a wider, more diversified asset class range than a traditional balanced portfolio.
- **Consistency** – Aim to provide investors moderate long-term growth with reduced volatility due to investment choice flexibility.

## DISCLOSURES

**Kingsview Wealth Management ("KWM")** is an investment adviser registered with the Securities and Exchange Commission ("SEC"). Registration does not constitute an endorsement of the firm by the SEC nor does it indicate that KWM has attained a particular level of skill or ability. Information presented is for educational purposes only and does not intend to make an offer or solicitation for the sale or purchase of any specific securities, investments, or investment strategies. Investments involve risk and unless otherwise stated, are not guaranteed.

**Kingsview Investment Management ("KIM")** is the internal portfolio management group of KWM. KIM asset management services are offered to KWM clients through KWM IARs. KIM asset management services are also offered to non KWM clients and unaffiliated advisors through model leases, solicitor agreements and model trading agreements. KWM clients utilizing asset management services provided by KIM will incur charges in addition to the KWM advisory fee.

Readers of the information contained on this fact card, should be aware that any action taken by the viewer/reader based on this information is taken at their own risk. This information does not address individual situations and should not be construed or viewed as any typed of individual or group recommendation. Be sure to first consult with a qualified financial adviser, tax professional, and/or legal counsel before implementing any securities, investments, or investment strategies discussed.

Any performance shown since inception is based upon composite results of the stated portfolio. Portfolio performance is the result of the application of the KIM ProCap investment process. It does not reflect any investor's actual experience with owning, trading or managing an actual investment account.

"Net of Model Fee" portfolio performance is shown net of the 0.60% KIM model fee and the trading costs of the firm's Custodians (Raymond James, Charles Schwab, TD Ameritrade and Interactive Brokers). "Net Model Fee" portfolio performance DOES NOT include the advisory fee charged by a KWM investment advisor representative. "Net of Max Fees" portfolio performance is shown net of the advisory fees of 2.10%, the highest fee charged by KWM, which is inclusive of the 0.60% KIM model fee and the trading costs of the firm's Custodians (Raymond James, Charles Schwab, TD Ameritrade and Interactive Brokers). Performance does not reflect the deduction of other fees or expenses, including but not limited to custodial fees and fees and expenses charged by mutual funds and other investment companies. Performance results shown include the reinvestment of dividends and interest on cash balances where applicable. The data used to calculate the portfolio performance was obtained from sources deemed reliable and then organized and presented by KWM.

Actual performance of client portfolios may differ materially due to the timing related to additional client deposits or withdrawals and the actual deployment and investment of a client portfolio, the reinvestment of dividends, the length of time various positions are held, the client's objectives and restrictions, and fees and expenses incurred by any specific individual portfolio.

**Past performance is no guarantee of future results. There are risks associated with any investment strategy, including the possible loss of principal. There is no guarantee that any investment will achieve its objectives. Diversification does not guarantee a profit or eliminate the risk of loss.**

**Benchmarks:** The S&P 500 Total Return Index is the total return version of the S&P 500 Index which includes the effects of reinvested dividends. The S&P 500 Index is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

The Bloomberg US Aggregate Bond Total Return Index is an index designed to provide a measure of the performance of the U.S. investment grade bonds market, which includes investment grade U.S. Government bonds, investment grade corporate bonds, mortgage pass through-securities and asset-backed securities that are publicly offered for sale in the United States. The securities in the index must have at least 1 year remaining to maturity. In addition, the securities must be denominated in US dollars and must be fixed rate, nonconvertible, and taxable.

The index results do not reflect fees and expenses and you typically cannot invest in an index. The index / indices used by KWM have not been selected to represent an appropriate benchmark to compare an investor's performance, but rather are disclosed to allow for comparison of the investor's performance to that of certain well-known and widely recognized indices. Indices are typically not available for direct investment, are unmanaged and do not incur fees or expenses.

**Glossary of Terms: Standard Deviation** measures the dispersion of returns; a large dispersion shows higher volatility. **Alpha** is a measure of actual returns and expected performance, given its level of risk (as measured by beta). **Beta** is a measure of the volatility, or systematic risk, of the composite portfolio in comparison to the market as a whole. **R-squared** indicates how much of the composite portfolio's fluctuations are attributable to movements of its benchmark. **Sharpe Ratio** is a measure of risk-adjusted performance.
